BeautifulSoup

Extract Headings Write a Python program using BeautifulSoup to extract and print all

headings from a webpage.

```
!pip install beautifulsoup4
```

Requirement already satisfied: beautifulsoup4 in /usr/local/lib/python3.13/dist-packages (4.13.5)

Requirement already satisfied: soupsieve>1.2 in /usr/local/lib/python3.13/dist-packages (from beautifulsoup4) (2.9.2)

Requirement already satisfied: typing-extensions>=4.0.0 in /usr/local/lib/python3.13/dist-packages (from beautifulsoup4) (4.16.0)

```
from bs4 import BeautifulSoup

html = """
<h2>Python</h2>
<h2>Data Science</h2>
<h2>Web Scraping</h2>
"""

soup = BeautifulSoup(html, "html.parser")

headings = soup.find_all("h2")

for heading in headings:
    print(heading.text)
```

Python
Data Science
Web Scraping

Extract Links Write a Python program using BeautifulSoup to extract all [tags](#) and print their link text and URLs.

```
from bs4 import BeautifulSoup

html = """
```

```
<a href="https://www.google.com">Google</a>
<a href="https://www.python.org">Python</a>
<a href="https://www.github.com">GitHub</a>
"""
```

```
soup = BeautifulSoup(html, "html.parser")
```

```
links = soup.find_all("a")
```

```
for link in links:
    print("Text:", link.text)
    print("URL:", link.get("href"))
    print()
```

Text: Google

URL: <https://www.google.com>

Text: Python

URL: <https://www.python.org>

Text: GitHub

URL: <https://www.github.com>

Seaborn

Bar Chart Create a Seaborn bar chart showing the sales of 5 different products.

```
import seaborn as sns
import matplotlib.pyplot as plt

products = ["Laptop", "Mobile", "Tablet", "Watch", "Headphone"]
sales = [50, 80, 40, 60, 90]

sns.barplot(x=products, y=sales)

plt.title("Product Sales")
plt.xlabel("Products")
plt.ylabel("Sales")

plt.show()
```

Scatter Plot Create a Seaborn scatter plot showing the relationship between students' study hours and their marks.

```
import seaborn as sns
import matplotlib.pyplot as plt

hours = [1, 2, 3, 4, 5, 6]
marks = [40, 45, 55, 65, 75, 85]

sns.scatterplot(x=hours, y=marks)

plt.title("Study Hours vs Marks")
plt.xlabel("Study Hours")
plt.ylabel("Marks")

plt.show()
```

Histogram Create a Seaborn histogram to display the distribution of students' marks.

```
import seaborn as sns
import matplotlib.pyplot as plt

marks = [35, 40, 45, 50, 55, 60, 65, 70, 75, 80, 85, 90, 95, 50, 60]

sns.histplot(marks, bins=5)

plt.title("Distribution of Students' Marks")
plt.xlabel("Marks")
plt.ylabel("Number of Students")

plt.show()
```
